Blazor WebAssembly or Blazor Server?

• SPA like problematics... in C# ♡

SPA like look & feel... but
computed on the server!

Hosted deployment or standalone?

Hosted

Standalone

Other linked questions:

- **Website** only or **Mobile** app / **Micro-service** architecture targeted?
- **Cookie**-based or **Token**-based authentication?
- **Public**-facing website with a lot of **traffic** expected?
- “SEO friendly”?

Hosting & DevOps complexity Ranking

Super Easy

Easy

Advanced

Blazor Server

Blazor Server

Classic ASP.NET Core app deployment

- Super easy to **secure** (ASP.NET Core mechanism)
- Super easy to **deploy** (auto-generated templates are using this architecture)

New pipeline

Configure your pipeline

Starter pipeline
Start with a minimal pipeline that you can customize to build and deploy your code.

Existing Azure Pipelines YAML file
Select an Azure Pipelines YAML file in any branch of the repository.

.NET Core Function App to Windows on Azure
Build a .NET Core function app and deploy it to Azure as a Windows function App.

.NET Desktop
Build and run tests for .NET Desktop or Windows classic desktop solutions.

Android
Build your Android project with Gradle.

Ant
Build your Java projects and run tests with Apache Ant.

ASP.NET
Build and test ASP.NET projects.

ASP.NET Core
Build and test ASP.NET Core projects targeting .NET Core.

ASP.NET Core (.NET Framework)
Build and test ASP.NET Core projects targeting the full .NET Framework.

**Azure App Service deployment**
Deploy your application to Azure App Service. Choose from Web App on Windows, Linux, containers, Function Apps, or WebJobs.

Apply

**Deploy a Java app to Azure App Service**
Deploy a Java application to an Azure Web App.

**Deploy a Node.js app to Azure App Service**
Deploy a Node.js application to an Azure Web App.

**Deploy a PHP app to Azure App Service and**

Blazor WebAssembly Hosted deployment

Azure App Service (hosted)

Classic ASP.NET Core app deployment

- Super easy to deploy (auto-generated templates are using this architecture)
- Well adapted for simple cookie-based authentication (but can still be enhanced / use default token-based authentication)
- Super easy to configure (use of current URI possible)
- Prerequisite for my one of my favorite feature: Server-side Prerendering ♡

-  **Deploy a PHP app to Azure App Service and**

*Same as Blazor Server

Blazor WebAssembly Standalone deployment

Standalone / Static files deployment

- Easy to deploy (no template but dotnet publish available)
- Allow to be managed independently (scale, be deployed (with caution... ☺)), as well as doing some optimizations
- Encourage token-based authentication (Mobile & Micro-services friendly)
- Need some "extra" configuration (CORS, API URL)
